8. (Amended) A 2-aminoteraline of the formula (I)

or a pharmacologically acceptable salt of the formula (II)

wherein:

R and R_1 are independently halogen, hydroxy, or C_1 - C_4 alkoxy optionally substituted in position ω with a group selected from OH, NH₂ or NR₃R₄ wherein R₃ and R₄ are independently H, C_1 - C_4 alkyl, unsubstituted or substituted in position ω with

groups OH, NH_2 , C_1 - C_4 alkanoyl, C_1 - C_4 alkyl, carbamoyl, carbamoyloxy, amino, or amino-substituted NR_3R_4 , where R_3 and R_4 have the above meanings,

R₂ is hydrogen, halogen, hydroxy or methoxy,

with the proviso that the 2-aminotetraline excludes (a) $R=R_1=CH_3O$ or OH, $R_2=H$, (b)

R=F, R_1 =CH₃O or OH, R_2 =H, (c) R_1 =R₂=-OCH₃ and R_2 =H, (d) R=R₁=R₂=CH₃O, (e)

 $R=R_1=Cl$ and $R_2=H$, (f) $R=R_1-F$ and $R_2=H$, (g) R=OH and $R_1=R_2=halogen$, (h) $R=R_1=OH$

and R₂=Cl or F or (i) R=R₁=OCH₃ and R₂=Cl or F,

and X is the monovalent anion of a pharmacologically acceptable acid.
